

Where to go from here...

Congratulations on the completion of the course!!!!

At the end of this course you should have learnt

- Declare PL/SQL Variables
- Conditionally control code flow (loops, control structures)
- Use some of the Oracle supplied PL/SQL packages to generate screen output
- Create anonymous PL/SQL blocks, functions and procedures
- Use PL/SQL packages to group and contain related sub programs
- Catch run time errors using Exceptions
- Perform Data processing using Records and Cursors
- Manage data using Collections

Right now I am working on the second part of this PL/SQL course which will cover some advanced topics like

- Triggers
- Bulk Processing
- Dynamic SQL
- and more...

I really hope you found this course to be a great resource for you in exploring Oracle Database. As you travelled through the course I'd love to get some feedback and also find out if there are any other topics you would find helpful.

If you ever have any questions at all please do not hesitate to contact me via the Course discussion board or a private message. I'm here to help!

Enjoy!
